school studies 01

Produce photographs of your own eye or a friend/family member and produce **pencil and colour pencil drawings** of the photograph.

Alternatively produce drawings from photographs of eyes - from google searches.

Concentrate on the change in colours and tones. When adding tones – follow the **contours of the eye** – shade in the **direction** of textures in the iris and the eye lashes. Build your drawing up in layers – shade in the **tones** of the eye before you add details/textures
